OBJECTIVE

Second-year B.Tech CSE student whose interests lie in Artificial Intelligence, Machine Learning, Data Science, and Robotics. Focused on building real-world, data-driven solutions by combining intelligent software with hardware, turning ideas into prototypes that solve problems worth solving.

EDUCATION

B.Tech. in Computer Science Engineering	2024 – Present
Vellore Institute of Technology, Vellore	CGPA: 8.9

SKILLS

Languages	Python, C, C++, Java, JavaScript, Assembly
Web Development	React, HTML, CSS, JavaScript, Tailwind CSS
Concepts	OOPs, DSA, Computer Vision, Machine Learning, Statistical Modeling, GenAI
Robotics	Hardware Integration, Edge AI, Sensor Fusion, Embedded Systems

EXPERIENCE & LEADERSHIP

Robotics Club – Editorial Head & Senior Core Member	VIT Vellore
- Led technical documentation and structured project reports for robotics initiatives. - Mentored junior members in robotics development and AI integration.	
AI/ML Club – Senior Core Member	VIT Vellore
- Organized AI/ML technical sessions, workshops, and knowledge sharing events. - Collaborated on applied machine learning projects focused on AI and data science.	
Toastmasters International	VIT Vellore
- Active member focused on leadership development and structured public speaking. - Competed in speech contests to enhance communication skills.	

PROJECTS

EVGuardian – Smart OBD AI Vehicle Health Monitoring [GitHub]
- Built a predictive analytics pipeline processing real-time OBD-II vehicle diagnostics data. - Implemented anomaly detection algorithms to identify early signs of component failure. - Enabled proactive maintenance alerts, reducing potential breakdown risk for EV owners.
Crowd Pulse – AI Crowd Stampede Prediction System [GitHub]
- Developed an IoT-enabled safety system using Edge AI and computer vision for real-time monitoring. - Analyzed crowd density and movement patterns to detect anomalies in high-footfall zones. - Generated predictive alerts to prevent potential stampede situations before escalation.
Autonomous Maze Solver Robot
- Designed a multi-sensor embedded robotic system with ultrasonic and IR sensors. - Implemented path optimization and real-time navigation algorithms for autonomous solving.
Gesture-Controlled Robot [GitHub]
- Built a computer vision-based gesture recognition system using OpenCV and MediaPipe. - Integrated gesture input with embedded hardware for real-time wireless robot control.
